TSCA - Significant New Use Rule (SNUR)

EPA has issued a Significant New Use Rule (SNUR) for Safire 400 at 40 C.F.R. §721.11190. The significant new uses are: (1) use other than as a flame-retardant additive in plastics; (2) release of a processing or use stream associated with any use of Safire 400 exceeding a surface water concentration of 34 ppb; and (3) processing or use of Safire 400 without employing the following engineering controls to limit exposure to dust: ventilation and negative-pressure systems with local exhaust (e.g., elephant trunks), and baghouse filtration, and enclosed unloading and transfer systems. Also, although not explicitly specified in the SNUR, we remind you that the product SDS

recommends the use of an NIOSH-approved N95 dust respirator for workers potentially exposed to dusts containing Safire 400. You must also maintain records documenting compliance with the use limitations, i.e, use as a flame-retardant additive in plastics, and the use of the engineering controls described above to limit exposure to dust; records documenting establishment and implementation of procedures that ensure compliance with the 34 ppb water discharge limitation, records documenting volumes of Safire 400 you purchased in the United States, the names and addresses of suppliers, and the corresponding dates of purchase, and records documenting the names and addresses (including shipment destination address, if different) of all persons to whom you directly sell or transfer Safire 400, the date of each sale or transfer, and the quantity of Safire 400 sold or transferred on such date. Finally, if you export or intend to export Safire 400 on or after May 6, 2019 you are subject to the export notification provisions of TSCA section 12(b) (15 U.S.C. 2611(b)) (see § 721.20), and must comply with the export notification requirements in 40 CFR part 707, subpart D.
